Over the two days in March 2022, the Energy Conference Network ran its first-ever Carbon Tracking & Reporting Conference in Houston. The event was a great success, attracting over 300 people in person and virtually.

Besides the networking opportunities with experts, leaders, and pioneers of the Oil & Gas community, Energy Conference Network delivered presentations from more than 30 unique speakers over two days. Those who attended the event had the privilege to hear about the latest carbon tracking technologies from NEO4j, Chevron, Shell, bp, Equinor, Deloitte, EY, and NASA, amongst many others.

#### Key topics presented at the conference:

- > Shell's Update: Getting to Net Zero – The importance of tackling climate change and the role we all play
- > An update on Chevron's energy transition and plan to improve emissions tracking
- > Discussions on the importance of including Scope 3 emissions and the ability to accurately track it in the Energy industry from Schlumberger, Chevron, Equinor, and Deloitte
- > Building a market and taking action to solve existing barriers facing GHG emission tracking in Oil and Gas from Chesapeake Energy
- > Moving from estimation to measurement using technology to track and measure carbon from NASA, Oxy, bp, and DCP Midstream
- > Carbon tracking using a graph database and the financial impact from Neo4j

*It was an exceptionally significant event. Attendees were exposed to numerous ideas, trends, techniques, and most importantly, actionable steps to enable their decarbonization efforts while supporting growth and stakeholder expectations.*

Sri Sridharan, Advisor, Pioneer Natural Resources

*The 2022 Carbon Tracking and Reporting Conference allowed the opportunity to interface with industry peers and offer a clearer understanding of the challenges of incorporating Scope 3 into my company's ESG plans.*

Joe Perino, Principal Analyst, LNS Research
